One year of “The G.O.D. Machine”

What is true — and what do we do once we know? A year after “The G.O.D. Machine”, Peter Dilg’s sequel “The Heretic’s Prophecy” is complete

A year ago, on 28 October 2025, BoD published the German edition of “The G.O.D. Machine”, the first book of the EDEN Chronicles. In 2101, humanity is running out of future: a mysterious sterility crisis has brought the species to the brink of extinction. A team of scientists creates Sofia, a superintelligent AI that uncovers the true cause and offers a radical way out: leaving biology behind. A near-future techno-thriller about power and responsibility, about machines in search of meaning, and about what makes us human when being human is no longer a given.

To mark the anniversary, the author announces the second book. “The Heretic’s Prophecy” is complete and in preparation for publication. It begins in Erdamor, a world that looks like the twelfth century: a walled city, an abbey, pyres for heretics. Seventeen-year-old novice Eli wants the one thing his Church cannot give him: certainty. His questions make him an outlaw and lead him through a hidden door beneath a monastery altar to a truth no one in his world is ready for: Erdamor is not what it seems.

The EDEN Chronicles are one great arc of storytelling spanning seven books: each story readable on its own, each set in a new world. They lead from a laboratory in 2101 to a medieval world of heretics, wolves and wonder. What binds them is a single question: not “what must I believe?” but “what is true — and what do I do once I know?”

ABOUT THE AUTHOR

Peter Dilg worked for twenty years as a computer engineer in the AI industry and watched our creations evolve: first machines, then language models, now agents. In a second career in meaning-oriented psychology he explores what we gain or lose as human beings when we embrace change. His novels follow those possibilities. He lives in Hamburg and Alicante.
